Sr. AWS and DevOps / SRE Engineer

Contact: +91-9985109284

Chennai, Tamilnadu.

Professional Summary

A highly accomplished **Senior SRE / DevOps and AWS Engineer** with **over all 6 years of comprehensive experience** in the IT industry. Expertise lies in optimizing the software delivery lifecycle through **Process Automation, Build & Deployment Automation, and Release Management**. Proven experienced in **AWS Administration**, covering end-to-end infrastructure configuration, building binaries, and managing deployments across enterprise applications. Proficient in the **Agile** development methodology.

Professional Experience

- **Senior SRE / DevOps and Cloud Engineering**
 - Led DevOps and SRE teams in designing scalable, secure, and highly available **cloud architectures**.
 - Provided technical leadership for **CI/CD** modernization, **cloud migration**, and reliability initiatives.
 - Reviewed **infrastructure**, deployment, and monitoring designs to ensure alignment with best practices.
 - Mentored junior engineers and guided teams on AWS, **Kubernetes**, IaC, and observability strategies.
 - Owned sprint planning, workload distribution
 - Designed proof-of-concept (POC) **architectures** for cloud migration, **containerization**, and monitoring transformations.
 - Evaluated AWS services such as **EKS, ECS, Lambda, API Gateway**, and Step Functions for enterprise adoption.
 - Performed POC for Infrastructure as Code (**Terraform**) automation including modularization and multi-environment setups.
 - Executed POC for **zero-downtime** deployment strategies including **Blue/Green, Canary**, and A/B testing.
 - Implemented POC for centralized logging and observability using **Prometheus, Grafana, Loki, and CloudWatch**.
 - Specializing in optimizing software delivery across multiple environments.
 - Managed and maintained **DEV, QA, Pre-production, and Production environments** to ensure consistency and successful application releases.
 - Proficient in administering and troubleshooting operating systems, including **Linux, Mac, and Windows**.
 - Collaborated effectively with cross-functional teams (**Development, QA**) to streamline workflows and achieve automated testing goals.
- **Continuous Integration/Continuous Deployment (CI/CD)**
 - Implemented and managed an efficient **CI/CD pipeline using Jenkins**.
 - Configured **End-to-End Build/Deploy Pipelines** for various projects, encompassing automated build, testing, deployment, and release processes.
 - Utilized **Git (GitHub, Git Bash)** for version control, branching, and code management.

- Expert in using **Maven** as the primary build tool to create deployable artifacts (**JAR, WAR, and EAR** files).
- Managed artifact storage and retrieval using repository managers like **Nexus and Artifactory**.
- Integrated code quality analysis tools like **Sonarqube** and **Unit Testing** into the CI/CD pipeline.
- Used **JIRA** for effective bug tracking and ticket management.
- **Cloud Infrastructure (AWS & IaC)**
 - Extensive expertise in **Amazon Web Services (AWS)**, specializing in configuration, maintenance, and monitoring of core services.
 - Designed and deployed infrastructure using **Infrastructure as Code (IaC)** with **Terraform**.
 - **Core AWS Service Proficiency:**
 - **Networking:** Configuring **Virtual Private Cloud (VPC)** with subnets, security groups, NAT instances and **Route 53** DNS records.
 - **Compute:** Managing and configuring **EC2** instances, **Elastic Load Balancers (ELB/ALB)**, and **Auto-Scaling Groups (ASG)**.
 - **Storage:** Utilizing **S3** for scalable object storage and managing **EBS, Snapshots, and Rds**.
 - **Security & Identity:** Managing user and access control using **IAM**.
 - **Monitoring & Logging:** Configuring **CloudWatch** for resource monitoring, alarm creation, and integration with Auto-Scaling, along with using **CloudTrail** and **Lambda**.
- **Monitoring, Logging, and Site Reliability Engineering (SRE)**
 - Implemented and maintained a comprehensive monitoring and alerting stack utilizing **Prometheus** for time-series data collection and **Grafana** for advanced visualization.
 - Designed real-time **Grafana dashboards** to track key **Service Level Indicators (SLIs)**, monitor infrastructure health (**EC2, Kubernetes**), and visualize **Error Budgets** to ensure adherence to **Service Level Objectives (SLOs)**.
 - Configured **Prometheus Alertmanager** with PromQL-based rules to ensure timely notification and routing of critical infrastructure and application alerts.
 - Leveraged Prometheus's **Service Discovery** to automatically scrape metrics from **AWS EC2 instances** (via Node Exporter) and **Kubernetes** clusters (EKS) for a unified monitoring view.
- **Containerization & Configuration Management**
 - Implemented and maintained container orchestration using **Kubernetes**, including installation, configuration, and clustering for managing local and large-scale deployments.
 - Utilized **Docker** for containerizing applications and standardizing environments.
 - Expert in **Configuration Management** using **Ansible**.
 - Employed **Rancher**'s catalog features to simplify the deployment of standardized, pre-configured applications and tools across all managed clusters, ensuring environment consistency.

Technical Skills

Category	Skills
Operating Systems	Linux, CentOS, Ubuntu, Windows
Version Control	Git, GitHub, Bitbucket
Cloud Technologies	AWS
CI/CD Tools	Maven, Jenkins, SonarQube, Nexus
Configuration Management	Ansible, Terraform
Monitoring/Logging	CloudWatch, Zabbix, Grafana, Nagios
Containerization	Docker, Kubernetes
Project Management	Jira, ServiceNow, Slack

Professional Work Experience:

1. Sr. DevOps Engineer / SRE | Saama Technologies

(Feb 13, 2023 – Present)

Project: Site Reliability Engineering (R&D Product)

Saama Technologies is a leading business analytics and AI company focused on the Life Sciences industry, revolutionizing clinical development and R&D with AI-driven solutions.

- **SRE and Operations**

- Led DevOps and SRE team initiatives by defining **architectural** standards and ensuring end-to-end reliability across cloud environments.
- Provided technical leadership training over the team for CI/CD modernization, **Kubernetes** adoption, and cloud-native transformation efforts.
- Conducted architectural reviews for infrastructure, deployment pipelines, security posture, and monitoring **frameworks**.
- Mentored team members on AWS best practices, container **orchestration**, **Infrastructure** as Code, and observability engineering.
- Coordinated major release activities, sprint planning, and technical decision-making for production upgrades.
- Architect-Level POC Activities
- Designed and executed multiple **Proof-of-Concepts** (POCs) for cloud migration, scalability, automation the process for smooth deliveries, improvements, and cost-optimization initiatives.

- Performed POCs for AWS EKS, automated scaling strategies, and **GitOps**-based deployment models.
 - Evaluated advanced deployment strategies such as **Blue-Green, Canary,** and Progressive Delivery for zero-downtime releases.
 - Conducted POCs for **Prometheus-Grafana**-based observability stack, including custom exporters, dashboards, and alerting workflows.
 - Built POCs for **Terraform** module standardization, multi-account structure automation, and secure environment provisioning.
 - Gained hands-on experience implementing **Blue/Green Deployment** for zero-downtime releases of production backend applications.
 - Developed **utility scripts (Shell, Python, Groovy)** to automate repetitive tasks, significantly reducing manual effort and time.
 - Provided **24/7 on-call support** for critical production environments.
 - Acted as a **SHIFT CO-ORDINATOR**, overseeing operations, directing ticket assignment, and performing **incident ticket assignment and execution** for production environment issues.
 - Monitored ticket and incident queues, ensuring analysis and resolution within the targeted **Service Level Agreement (SLA)**.
 - Coordinated cross-functionally with Development, QA, Database Administration, and IT Operations teams to ensure smooth application delivery.
- **CI/CD and Release Management**
 - Designed and implemented a robust **Branching Strategy** to facilitate parallel development and manage source code integrity.
 - Built and automated jobs using **Jenkins and a CI/CD Pipeline** for efficient build, testing, and deployment processes.
 - Managed the end-to-end software delivery process, including code merge, build, and deployment across all environments (Dev, Test, Pre-Prod, Production).
 - Implemented **Continuous Integration, Nightly, and Branch Builds** in Jenkins aligned with application release cycles.
 - Utilized **Maven** to create application artifacts (**WAR/EAR files**) , and configured **Nexus Repository Manager** for centralized artifact management.
 - **Containerization and Orchestration**
 - Implemented **Docker containerization** to standardize environments, ease development, and streamline the deployment pipeline.
 - Created **Dockerfiles**, built images, and pushed them to a managed **Docker private registry**.
 - Deployed and scaled applications using **Kubernetes** to provide a consistent environment from Development through Production.
 - Responsible for the **installation, configuration, and clustering of Kubernetes** environments.
 - Implemented **Load Balancing and Auto-Scaling** within Kubernetes clusters to enhance application resilience and performance.
 - Utilized **Rancher** for centralized management, deployment, and operational monitoring of multiple Kubernetes clusters, streamlining cluster lifecycle management.

2. Freelance projects:

(Dec 2021 – Aug 2022)

- **Think and Learn**
- **EbixCash**
- **WayCool foods and private ltd.**

3. Associate DevOps Engineer | Tech Mahindra (Maersk Project)

(April 2019 – Dec 2021)

Client: Maersk (Global Container Shipping Line)

Description: Maersk was the largest container shipping line and vessel operator in the world from 1996. The company is based in Copenhagen, Denmark, with subsidiaries and offices across 130 countries. Shipping with Maersk is no different from buying goods, tracking deliveries, and paying online. Our tailored online services take the complexity out of shipping by letting you instantly book, manage, and track shipments submit Verified Gross Mass information, and much more.

- **CI/CD and Automation**
 - Created and managed **Continuous Integration, Continuous Deployment, and Continuous Delivery pipelines** using Jenkins declarative pipeline.
 - Worked with Agile teams to manage the DevOps automation process setup for multiple application releases.
 - Responsible for **GIT Branching, Merging, and Tagging** across production releases and performing builds using Jenkins with Maven build scripts.
 - Built and deployed customized EARs, conducted smoke testing, and troubleshooted build/deployment issues.
- **AWS and Infrastructure**
 - Experienced with **AWS VPC setup, Subnet Configurations, Security management, Load balancing setup, and dynamic Auto-Scaling** for production environments.
 - Managed the data management lifecycle on **AWS S3** different classes and life cycle rules.
 - Hands-on experience in monitoring servers and services on AWS using **CloudWatch**.
 - Knowledgeable in **AWS CloudFront, Route53, IAM** custom policy generation, and **CloudFormation**.
- **Process and Operations**
 - Involved in all phases of the **SDLC** from Requirement gathering, Design, Build, Test, Deploy, and environment setup/monitoring.
 - Monitored Jenkins builds and environments, troubleshooting issues across different stages of the build and deployment process.
 - Experienced in **Windows and Linux server monitoring and troubleshooting**.
 - Collaborated with Development managers, test teams, Scrum Masters, and SMEs on activities including code deployments, branch cutting, merging, and environment setup.

Education

B.Tech (ECE) from JNTU Ananthapur, 2019

**Thanks
Naveen Gudi**
